

**ABSTRACT**

**ALPINE SKI**

5 Alpine ski (1) having a sidecut (9) which has a radius  
smaller than 24 meters, wherein the front (10) and/or  
rear (18) ends have a cavity (11, 15) opening  
longitudinally at said end, the dimensions of the  
cavity (11, 15) allowing the deformation of said end  
10 when a transverse force is exerted at the front and/or  
rear contact lines so as to permit the inner and outer  
edges of the ski to move closer to one another.
